1. Area of application of your GARDENA Submersible Pressure Pump

Purpose:

The GARDENA Submersible Pressure Pump is intended for the private use in house and hobby gardens. It is intended for draining water from fountains, cisterns and other water reservoirs or for operating irrigation equipment and systems.

Liquids to be pumped:

The GARDENA Submersible Pressure Pump must only be used to pump clear, fresh water.

The pump is watertight and is submerged in water (for max. submersion depth, see 8. Technical specifications).

The pump is equipped with an integrated check valve, which prevents automatic drainage of the pressure hose when the pump is shut down.

Salt water, contaminated water, corrosive, easily flammable, or explosive substances (for example gasoline, petroleum, cellulose thinner), oil, heating oil, and foodstuffs may not be conveyed. The water temperature may not exceed 35° C.

2. Safety instructions

Electrical Safety:

DANGER! Electric shock!

With a cut off mains plug, moisture can get into electrical parts via the mains cable and cause a short circuit.

- **Never cut the mains plug off (e.g. to feed through wall).**
- **Don't use the power cable for plugging off.**

DANGER! Electric shock!

A damaged pump must not be used.

- In case of damage, please have the pump checked by our GARDENA Service Centre.
- Before operating the pump, first make a visual check, if there is any damage of the pump (esp. regarding power cable and plug).
- If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

According to DIN VDE (German Electrical Engineers' Association) 0100, submersible pressure pumps may only be used in swimming pools, garden ponds, and fountains if the pump is operated via a residualcurrent device with a residual-current rating of $\leq 30\text{ mA}$. The pump must not be operated when there are persons in the swimming pool or garden pond.

For safety reasons we recommend that you always operate the submersible pressure pump via a residual-current device (DIN VDE 0100-702 and 0100-738).

- Please contact your electrician.

The cable length must be at least 10m.

The power cable of the Submersible Pressure Pump must be connected to a socket which is positioned at a height of 1.10m (measured from ground). Take care that the power cable leads downwards.

Data indicated on the type plate must match technical data of the mains supply.

Only use extension cables authorised in accordance with HD 516.

- Consult your qualified electrician.
- Take care that the electrical connections are made within dry area, protected from flooding.
- Keep mains plug dry.

Protect plug and power cable from heat, oil and sharp edges.

The power cable must not be used for mounting or relocating the pump. For submerging or lifting/securing the pump, please use the fastening rope.

In Austria:

In Austria, according to ÖVE B/EN 60 555 part 1 to 3, pumps which are used in swimming pools and garden ponds, and equipped with firm power cable should be fed via an ÖVE approved isolating transformer – rated voltage must not exceed 230 V.

In Switzerland:

In Switzerland mobile appliances which are used outdoors, must be connected via a residual-current device.

Notes on use:

When connecting the pump to the water supply system, the country-specific sanitary regulations must be observed to prevent water not of drinking water quality being drawn back in.

- If necessary, contact your sanitary expert.

Sand and other abrasive substances cause increased wear and reduce the pump's output.

During operation, the pump must always be submersed in the water up to the minimum submersion depth (see 8. Technical specifications).

Do not allow the pump to run for more than 10 minutes against the closed pressure side (e.g. closed valve, closed dispenser etc.).

Leaking lubricants can contaminate the pumped liquid.

Warning! This unit makes an electromagnetic field while it operates. This field may under some conditions interfere with active or passive medical implants. To decrease the risk of conditions that can possibly injure or kill, we recommend persons with medical implants to speak

with their physician and the medical implant manufacturer before operating.

Warning! Keep toddlers away when you assemble the unit. Small parts can be easily swallowed. There is also a risk that the polybag can suffocate toddlers.

3. Initial Operation

Connect hose via the GARDENA Connection System:

19mm (3/4")-/16mm (5/8") and 13mm (1/2") hoses can be connected via the GARDENA Connection System.

Hose diameter	Pump connection	
13mm (1/2")	Pump Connection Set	Art. 1750
16mm (5/8")	GARDENA Tap Connector GARDENA Hose Connector	Art. 18202 Art. 18216
19mm (3/4")	GARDENA Pump Connection Set	Art. 1752

The pump connection component ① is already pre-installed by the manufacturer together with the check valve ⑤.

→ Connect hose via the relevant GARDENA Connection System.

Backflow preventer ⑤:

The backflow preventer ⑤ prevents the hose from running empty after the pump has been turned off or taken out of operation.

With a parallel connection of more than one hose or connected devices, the **GARDENA 2-/4-Way Valve (Art. 8193 / 8194)** can be used, which is screwed straight onto the pump connection piece ①.

Pump installation:

The pump must always be submerged in the fountain or water reservoir with the fastening rope ③ provided. For the pump to be primed, the pump must be submerged to the minimum submersion depth ① ((see 8. Technical specifications)). So that the filter does not become dirty, the pump should be fixed at least 30cm above the ground.

1. Attach the fastening rope ③ to the handle ④.
2. Submerge pump in the fountain or water reservoir via the fastening rope ③.
3. Secure fastening rope ③.
4. With deep fountains or shafts (from approx. 5m), route the connection cable ⑤ along the fastening rope ③ with clips.

Thermal protection switch:

In the event of an overload, the pump is switched off by the built-in thermal motor protection. After sufficient cooling of the motor, the pump is operational again.

4. Operation

GB

Automatic operation:

The float switch ⑥ turns the pump on automatically when the water level exceeds the cut-in height and the water is pumped out. The float switch ⑥ turns the pump off again as soon as the water level falls below the cut-out height.

→ During automatic operation, ensure that the float switch ⑥ can move freely.

Adjusting the Cut-in and Cut-out Height:

The cable length between the float switch ⑥ and the float switch lock ⑦ must always be at least 10cm.

1. Press the cable of the float switch ⑥ into an opening in the float switch lock ⑦.
Do not select a cable length that is too long or short to ensure that the float switch can turn on and off properly.
2. Plug the mains plug of the connection cable ⑤ into a mains socket. *The pump is now ready for operation.*
 - The higher the opening of the float switch lock ⑦, the higher the cut-in and cut-out height.
 - The shorter the length of cable between the float switch ⑥ and the float switch lock ⑦, the lower the cut-in height and the higher the cut-out height.

Manual operation:

The pump remains in constant operation when the float switch is attached facing upwards so that the cable is pointing downwards.

→ Attach the float switch ⑥ to the top so that the cable points downward.

The residual water height of approx. 25mm is only reached during manual operation since the float switch turns off the pump during automatic operation before this water level is reached.

5. Storage

To put into storage:

The storage location must not be accessible to children.

→ Store the pump away from frost before the first frost sets in.

Disposal:

(in accordance with
RL 2012/19/EU)

The product must not be added to normal household waste. It must be disposed of in line with local environmental regulations.

→ Important: Make sure that the unit is disposed of via your municipal recycling collection centre.

6. Maintenance

Clean suction foot with inlet screen:

DANGER! Electric shock!

There is a risk of injury from electric shocks.

→ Before maintenance, disconnect the submersible pressure pump from the mains.

Do not use any corrosive or abrasive cleaning media.

1. Unscrew the 4 screws ⑧ with a screwdriver.
2. Remove the suction foot valve ⑨ with inlet screen from the pump and clean it.
3. Attach the suction foot valve with the inlet screens ⑨ to the pump and tighten the 4 screws ⑧ with washers ⑩.

For safety reasons, a damaged turbine must only be replaced by GARDENA Service.

7. Troubleshooting

DANGER! Electric shock!

There is a risk of injury from electric shocks.

→ Before eliminating faults, disconnect the submersible pressure pump from the mains.

Fault	Possible cause	Remedy
The pump does not deliver any water	Air cannot escape as the pressure line is closed.	→ Open pressure line (e. g. bent pressure hose).
	Air cushion in suction foot.	→ Unplug mains cable and plug in again.
	When starting the pump, water height falls below the min. water level.	→ Submerge pump deeper (see 8. Technical Data / Minimum submersion depth on commissioning).
	Suction foot/inlet screens clogged.	→ Unplug the mains plug and clean the suction foot valve (see 6. Maintenance).
	Pump overheated: Thermal protection switch switched pump off due to overheating.	→ Unplug the mains plug and clean the suction foot valve (see 6. Maintenance). Observe max. media temperature (35 °C).
	Power supply interrupted.	→ Check fuses and electrical plug-in connections.
	Check valve jammed.	→ Disassemble check valve and clean (see 3. Initial operation).
Delivery rate suddenly decreases.	Suction foot/inlet screens clogged.	→ Unplug the mains plug and clean the suction foot valve (see 6. Maintenance).

For any other malfunctions please contact the GARDENA service department.
Repairs must only be carried out by GARDENA service departments or specialist dealers authorised by GARDENA.
