### Original instructions.

Never operate the product when you are tired, ill or under the influence of alcohol, drugs or medicine.

This product may be used under supervision, or if instruction regarding the safe use of the product has been provided and the resulting dangers have been understood, by children aged 8 and above, as well as by persons with physical, sensory or mental disabilities or a lack of experience and knowledge. Children must not be allowed to play with the product. Cleaning and user maintenance must not be performed by children without supervision. The use of this product by young people under the age of 16 is not recommended.

### Intended use:

GARDENA Electronic Pressure Pumps have been designed for private use around the house and garden. Electronic Pressure Pumps are predominantly used for operating watering systems and systems in private gardens.

**When using the pump for pressure intensification, the maximum permissible internal pressure of 6 bar (on the delivery side) must not be exceeded. The delivery pressure to be increased and the pump pressure have to be added together.**

- Example: pressure at the tap = 2.0 bar, maximum pressure of the Electronic Pressure Pump 3500/4E = 3.5 bar, total pressure = 5.5 bar.

### Liquids pumped:

The GARDENA Electronic Pressure Pump can be used for pumping rainwater, tap water and chlorinated water.

**IMPORTANT! The GARDENA Electronic Pressure Pump is not suitable for continuous operation (e.g. industrial applications, continuous circulating operation). Corrosive, easily combustible, aggressive or explosive liquids (such as gasoline, petroleum or nitrothinner), saltwater and food intended for consumption must not be pumped. The temperature of the liquid must not exceed 35 °C. Before the beginning of the frost period, the Electronic Pressure Pump must be drained and placed in frost-proof storage (see 5. Storage).**

## 1. Safety Instructions

### Electrical safety

**DANGER! Electric shock!**

**Risk of injury due to electric shock!**

→ Always unplug your pump before filling, after operation, before troubleshooting and before carrying out any maintenance work.

The pump must be supplied through a residual current device (RCD) having a rated residual operating current not exceeding 30 mA.

The pump must be located on solid, even ground, protected from flooding. Take care that the pump cannot fall into water.

As an additional safety device an approved safety switch can be used.

→ Please ask your electrician for his advice.

When connecting the pump to the water supply system, the country-specific sanitary regulations must be observed to prevent water not of drinking water quality being drawn back in.

### **DANGER! Electric shock!**

The pump must not be used when people are in water.

Make sure that the electrical plug and socket connections are fitted in an area which cannot be flooded.

Protect the power plug from moisture.

### **DANGER! Electric shock!**

With a cut off mains plug, moisture can get into electrical parts via the mains cable and cause a short circuit.

Do not cut the mains plug off (e. g. to feed through a wall).

Do not use the power cable for plugging off.

→ If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

### **Extension cables**

Data indicated on the type plate must match the technical data of the mains supply.

Following DIN VDE 0620 the power cable as well as any extension cable must not have a smaller diameter than rubber sheathed cables described with letter symbols H07 RNF.

→ If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

Protect the power cable from heat, oil and sharp edges.

→ Do not use the power cable for carrying the pump or for unplugging.

### **In Austria**

In Austria the electrical connection must satisfy the ÖVE-EM 42, T2 (2000)/1979 § 22 to § 2022.1. This requires that pumps used for swimming pools and garden ponds may only be powered through an isolating transformer.

→ Please ask your electrician for his advice.

### **In Switzerland**

In Switzerland portable devices that are used outdoors must be connected through a residual-current device.

### **General Information**

### **DANGER! Scalding from hot water!**

**The water can get very hot during operation (particularly if only small quantities are drawn).**

→ **Before carrying out any work on the pump, allow it to cool down (for at least 30 minutes).**

### **Visual check**

→ Before operating the pump, first make a visual check to ensure there is no damage to the pump (especially regarding power cable and plug).

A damaged pump must not be used.

→ In case of damage, please have the pump checked by our GARDENA Service Centre or by an authorised electrician.

### **Safety in operation**

Protect the pump from rain. Do not use the pump in a wet or moist area.

In order to avoid dry-running of the pump, take care that the end of the suction hose is always submerged into the water.

→ Before each operation, fill the pump to overflowing with approx. 2 to 3 l of water to be pumped!

Very fine sand can pass through the integrated filter (mesh size 0.45 mm) and cause accelerated wear in the hydraulic parts.

→ For sandy water, you should additionally use the GARDENA pump pre-filter, art. no. 1730 (mesh size 0.1 mm).

Please ensure that no unauthorised persons or children are within reach of the pump and the pumped medium without supervision.

When using the pump for domestic water supply, please adhere to the local water and sewerage regulations. In addition observe the regulations of DIN 1988.

→ If necessary, contact your local water authority.

**DANGER!** This product makes an electromagnetic field while it operates. This field may under

some conditions interfere with active or passive medical implants. To decrease the risk of conditions that can possibly injure or kill, we recommend persons with medical implants to speak with their physician and the medical implant manufacturer before you operate the product.

**DANGER!** Small parts can be easily swallowed. There is also a risk that the polybag can suffocate toddlers. Keep toddlers away when you assemble the product.

## 2. Function

---

### **Low quantity programme (Leakage Warning):**

The Electronic Pressure Pump is equipped with an electronic control which automatically turns on the pump when the cut-in pressure has fallen and automatically switches off when no more water is extracted.

The low quantity programme allows for trouble-free use of, for example, modern washing machines or drip irrigation systems, even with low water flow. Operating interval: Up to 60 minutes (leakage warning may be triggered after 60 minutes).

**Note: The cyclical activation and deactivation of the Electronic Pressure Pump in small amount mode is due to the system design and does not have any impact on pump life.**

**For irrigation:** If the low quantity programme is to be used for more than 60 minutes, irrigation must be disrupted for at least 5 minutes before the end of the 60 minute period. The small amount programme can then be used for a further 60 minutes.

**Use of washing machines:** Upon completion of the minimum amount water supply cycle in washing machines, the 60-minute operating interval of the low quantity programme is automatically reset to normal operation of the Electronic Pressure Pump and allows a trouble-free use of the washing machine for > 60 minutes.

### **Info-LED:**

The pump is equipped with a faults diagnostics system where various disturbance states can be determined by the Info LED (see 7. Troubleshooting).

## 3. Installation

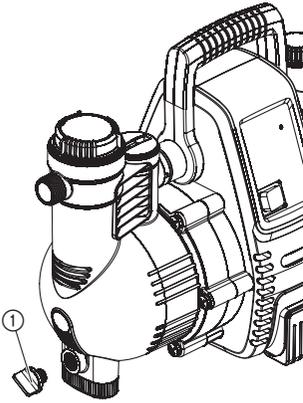

---

### **Positioning of Electronic Pressure Pump:**

The installation position must be firm and dry, and permit a secure mounting for the Electronic Pressure Pump.

→ Install the Electronic Pressure Pump at a safe distance (min. 2 m) from the pumping medium.

The pump must be installed in a location with an air humidity of < 80 % and sufficient ventilation in the area of the ventilation slots. It must be at a distance of at least 5 cm from the walls. No dirt contamination (e.g. sand or earth) may be sucked in through the ventilation slots.

Set up the Electronic Pressure Pump so that it is prevented from slipping and that an appropriately large collecting vessel for draining the pump or the system can be placed under the drain screw ①.

If possible, install the Electronic Pressure Pump higher than the surface of the water to be pumped. If this is not possible, install a vacuum-resistant shut-off device between the Electronic Pressure Pump and the suction hose, for example for cleaning the integrated filter.

If the system is being installed permanently, please fit suitable shut-off devices on both the intake and delivery sides. Important for maintenance and cleaning work on the Electronic Pressure Pump or for shutdown, for example.

### Connections:

**The GARDENA connection pieces on the intake and delivery sides may only be tightened by hand. Check whether the seal ring is present and undamaged before screwing the suction hose onto the suction inlet. When using metal connections, damage could occur on the connection thread due to inappropriate assembly. Therefore, screw on the connection fittings with the upmost care. Use sealing tape only for sealing metallic connection fittings.**

### Suction inlet:

Do not use any water hose snap connection system components on the intake side! A vacuum-tight suction hose must be used e.g.:

- GARDENA Suction Hose **Art. no. 1411/1418**
- GARDENA Bore Hole Suction Hose **Art. no. 1729**
- GARDENA Suction Hose sold by the metre and **Art. no. 1723/1724**.

If very fine dirt is present, we recommend the use of a **GARDENA pump preliminary filter Art. no. 1730/1731** in addition to the integrated filter.

To reduce the pump repriming time, we recommend:

- Using a suction hose with backflow preventer, which prevents the suction hose emptying automatically when the Electronic Pressure Pump is switched off.

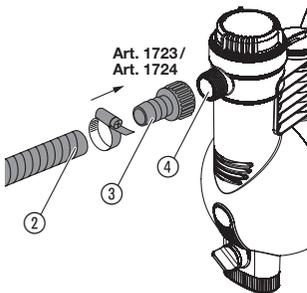

### Particularly important for fixed installation:

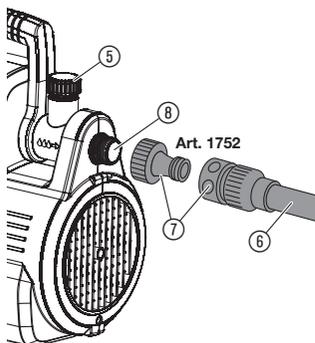

- with larger suction heads, use a suction hose with a smaller diameter (3/4").

1. Connect the vacuum resistant suction hose, sold by the metre ②, using the suction hose fitting ③ (e.g. **Art. no. 1723/1724**) with the connector on the suction side ④ and screw on airtight.

2. For suction heights exceeding 4 m also secure the suction hose (e.g. by fastening it to a wooden post).

*The pump and the suction hose are relieved from the weight of the water.*

**Pressure outlet:**

The hose can be connected either to the delivery side 33.3 mm (G 1)-thread of the 120° swivelling connection and/or of the horizontal connection. **Art. no. 1757** only has a horizontal connection. Use pressure-resistant hoses such as:

- GARDENA Garden Hose (3/4") **Art. no. 18113** with GARDENA Connection Set **Art. no. 1752**.

Open the spray nozzle at the water hose, open the water tap, operate the toilet flush.

If the pump is permanently installed indoors for domestic water supply, the Electronic Pressure Pump should not be connected to the domestic water pipework with rigid pipes but with flexible tubing (e.g. reinforced hoses), to reduce noise and to avoid damage to the pump caused by pressure blows.

Install fixed pipes at an upward gradient on the first 2 m only.

## 4. Operation

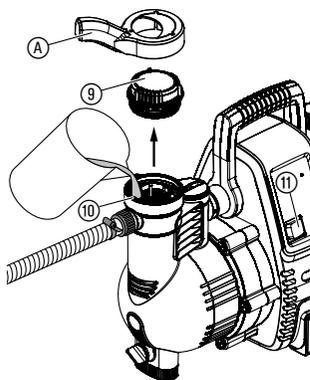

### Filling the Electronic Pressure Pump:

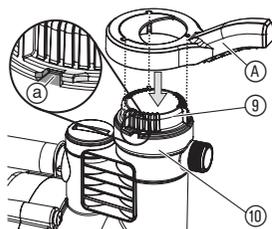

**DANGER! Electric shock!**

**Risk of injury due to electric shock!**

→ **Before filling the Electronic Pressure Pump, unplug the equipment from the mains.**

1. Unscrew the lid ⑨ of the filter chamber with the spanner ① provided.
2. Slowly fill in the liquid to be pumped via the filler connection ⑩ up to the overflow (approx. 2 to 3 l) until the water level no longer drops under the suction side inlet or the water flows out at the horizontal connector. With fixed installations, unscrew the black lid ⑭ and fill with liquid until it flows towards the horizontal connector.
3. Empty any water remaining in the delivery hose so that the air can escape during filling and priming.
4. Open any shut-off devices in the delivery line (watering accessories, tap, etc.) so that air can escape before the priming procedure begins. If the delivery line cannot be emptied due to fixed installation, unscrew the black lid. Considerable amounts of liquid may escape. Please keep a sufficiently large receptacle at hand for collection.
5. Tighten the lid ⑨ of the filter chamber up to the stopper ③.
6. Lift up the delivery hose just behind the pressure outlet.
7. Insert mains plug into a 230 V / 50 Hz AC socket.
8. Change the switch ⑪ to I.  
*The switch is illuminated and the pump starts after approx. 2 seconds.*
9. Close shut-off devices in the delivery pipeline again when the pump begins to continuously convey water.  
**The pump turns off automatically approx. 10 seconds after closing the shut-off device. The normal operation (Standby) has been reached.**

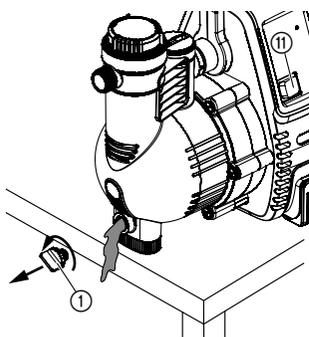

The specified max. self-priming suction height (see 9. Technical Data) is only achieved if the pump is filled via the filler connection ⑩ until it overflows and the delivery hose is held high enough just behind the pressure outlet during the first self-priming that no pumped medium can escape from the pump via the delivery hose. It is not necessary to hold up the delivery hose if filled suction hoses with backflow preventer are used.

The suction process can take up to 6 min. If no water is pumped afterwards, the Electronic Pressure Pump will shut down automatically and display Error 2.

## 5. Storage

**To put into storage:**

**Disposal:**  
(in accordance with  
RL2012/19/EC)

If there is a risk of frost, the Electronic Pressure Pump must be emptied and stored where it will not become frozen. Store out of the reach of children.

1. Change the switch ⑪ to **O**.
2. Unplug the mains connection for the pump.
3. Open the delivery side consumer.
4. Remove the connected hoses on the pressure and suction sides.
5. Unscrew drain bolt ①.
6. Tilt the pump to the suction and pressure side until water is no longer discharged from either side.
7. Store the pump in a frost-free, dry place.

The product must not be disposed of to normal household waste. It must be disposed of in line with local environmental regulations.

→ Dispose of the product through or via your municipal recycling collection centre.

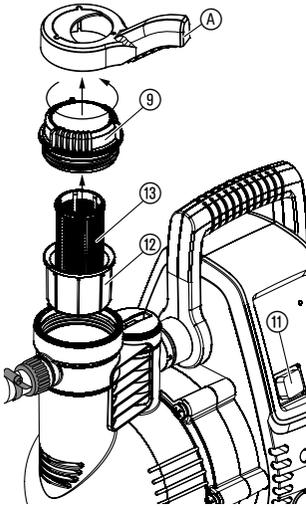

## 6. Maintenance

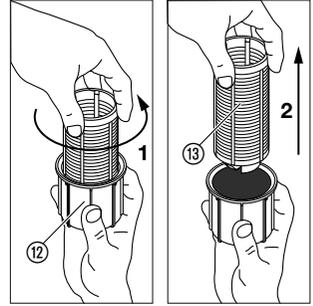

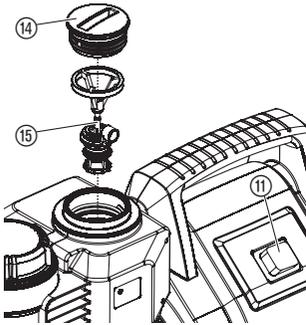

**Danger! Electric shock!**

**Risk of injury due to electric shock!**

→ Pull out mains plug before undertaking any maintenance.

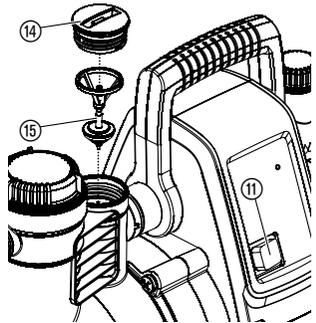

**Clean built-in filter:**

1. Change the switch (11) to **O**.
2. Disconnect mains plug.
3. If necessary, close all the shut-off devices on the intake side.
4. Unscrew the lid (9) of the filter chamber with the spanner (A) provided.
5. Draw out filter unit (12) (13) vertically upwards.
6. Hold cup (12) firmly, turn filter (13) anti-clockwise 1 and draw out 2 (bayonet fitting).
7. Hold cup (12) under running water and clean the filter (13) e.g. with a soft brush.
8. Refit filter again in reverse order.
9. Switch Electronic Pressure Pump on again (see 4. Operation).

**Cleaning the check valve:**

Art. no. 1757

1. Change the switch (11) to **O**.
2. Disconnect mains plug.
3. If necessary, close all valves on the intake side.
4. Open all pressure side outlets, so that the pressure side is depressurised. Afterwards, close the tapping points again in order to prevent the connected lines running empty via the Electronic Pressure Pump.
5. Screw out the cover (14) of the check valve using a suitable tool.
6. Remove the valve body (15) and wash it under running water.
7. Refit check valve again in reverse order.
8. Verify that the check valve is able to move freely.
9. Switch Electronic Pressure Pump on again (see 4. Operation).

Art. no. 1758

**CAUTION!****Do not operate the pump without the check valve.****7. Troubleshooting****DANGER! Electric shock!**

→ Unplug the cable at the mains before troubleshooting.

Work on the electrical parts must only be carried out by GARDENA Service Centres.
