Original instructions.

This product may be used under supervision, or if instruction regarding the safe use of the product has been provided and the resulting dangers have been understood, by children aged 8 and above, as well as by persons with physical, sensory or mental disabilities or a lack of experience and knowledge. Children must not be allowed to play with the product. Cleaning and user maintenance must not be performed by children without supervision. The use of this product by young people under the age of 16 is not recommended. Never

operate the product when you are tired, ill or under the influence of alcohol, drugs or medicine.

Intended use:

GARDENA Pumps have been designed for private use around your house and garden. They are predominantly destined for drainage after flooding, transfer of liquids, draining containers, taking water from wells and shafts, draining boats and yachts as well as for water aeration and circulation for a limited period of time.

Liquids to be pumped:

Liquids which can be handled by the GARDENA Pump are the following: clean and contaminated water (max. particle size 21000 inox = 5 mm / 20000 inox = 38 mm), chlorinated water (prerequisite is the recommended dosage of additives) and soapy water. Dirty water with solid particles such as sand or stones leads to wear of the turbine and of the pump base.

The pumps are fully submersible (waterproof sealed) and can be immersed in the liquid down to a depth of 7 m.

CAUTION! The GARDENA Pumps are not designed for continuous operation (e.g. continuous circulating operation) in a pond. Your pump's life will be shortened correspondingly by such operation. Corrosive, easily combustible or explosive substances (e.g. gasoline, petroleum, nitro thinner), fats, oils, salt-water and waste water of toilets and urinals must not be pumped. The temperature of the liquid handled should not exceed 35 °C.

1. SAFETY

IMPORTANT!

Read the operator's manual carefully before use and keep for future reference.

Electrical safety

DANGER!

Risk of injury due to electric shock.

The product must be supplied through a residual current device (RCD) having a rated residual operating current not exceeding 30 mA.

The pump must not be used when people are in water.

→ Please contact your electrician.

According to DIN VDE (German Electrical Engineers' Association) 0620, mains power cables must not have a smaller cross-section than the rubber-sheathed cables of the designation H07RN-F. The cable length must be at least 10 m.

Data indicated on the type plate must match technical data of the mains supply.

→ Take care that the electrical connections are made within dry area, protected from flooding.

→ Keep mains plug dry.

Protect plug and power cable from heat, oil and sharp edges.

DANGER! Electric shock!

With a cut off mains plug, moisture can get into electrical parts via the mains cable and cause a short circuit.

→ **Never cut the mains plug off (e.g. to feed through wall).**

→ Don't use the power cable for plugging off.

→ If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

The power cable or the float switch must not be used for mounting or relocating the pump.

For submerging or lifting/securing the pump, fix a rope to the pump's carrying handle.

Extension cables must meet the requirements of DIN VDE 0620.

In Austria

In Austria the electrical connection must satisfy the ÖVE-EM 42, T2 (2000)/1979 § 22 to § 2022.1.

This requires that pumps used for swimming pools and garden ponds may only be powered through an isolating transformer.

→ Please ask your electrician for his advice.

In Switzerland

In Switzerland mobile appliances which are used outdoors, must be connected via a residual-current device.

Visual check

- Before operating the pump, first make a visual check, if there is any damage of the pump (esp. regarding power cable and plug).
- Observe the minimum water level and the max. delivery height (see 7. TECHNICAL DATA).

DANGER! Electric shock!

A damaged pump must not be used.

→ In case of damage, please have the pump checked by our GARDENA Service Centre.

Manual operation

During manual operation, the pump must be switched off as soon as all the liquid has been pumped away.

→ Observe the pump at all times during manual operation.

Notes on use

Dry-running operation causes increased wear and is to be avoided. Therefore, in manual operation the pump must be immediately unplugged when water fails to flow. Avoid running of the pump for more than 10 min. against closed delivery side of the pump.

Sand and other abrasive substances cause increased wear and reduce the pump's output.

Take care that the pump is located where the inlet openings at the suction base are obstructed neither completely nor partly.

Stand the pump on a brick if using in a pond.

Leaking lubricants can contaminate the pumped liquid.

Instructions for or 21000 inox

When you purchase your pump the swivel feet are set to the **flat suction position** (1 mm).

→ For normal operation, turn the feet 180° to 5 mm.
The pump is lifted 5 mm.

→ Clear the outlet line before use.

Thermal protection switch

The pump is automatically switched off on overheating by the built-in thermal motor protector. After having cooled down, the motor automatically switches on again (see 6. TROUBLESHOOTING).

Automatic deaerating valve [Fig. S1]

The automatic deaerating valve eliminates any air pockets in the pump.

If the pump is half submersed, water may come out of the ventilation holes ④.

This is not a defect of your pump, but serves to deaerate the pump.

DANGER!

This product makes an electromagnetic field while it operates. This field may under some conditions interfere with active or passive medical implants. To decrease the risk of conditions that can possibly injure or kill, we recommend persons with medical implants to speak with their physician and the medical implant manufacturer before you operate the product.

DANGER!

Small parts can be easily swallowed. There is also a risk that the polybag can suffocate toddlers. Keep toddlers away when you assemble the product.

2. INITIAL OPERATION

Hose diameter	38 mm (1 ½")	50 mm (2")
Hose connection of the large universal fitting ⑦ [Fig. I1]	[Fig. I2]	[Fig. I3]
Hose connection	Do not cut off any nipples.	Cut off nipple at ⑧.
Best results in delivery capacity are achieved when using 50 mm (2") hoses.		
Hose diameter	13 mm (½")/16 mm (⁵/₈")/19 mm (¾")	25 mm (1")
Hose connection of the small universal fitting ⑨ [Fig. I4]	[Fig. I5]	[Fig. I6]
Hose connection	Cut off nipple at ⑩ and ⑪.	Cut off nipple at ⑫.
For connection of 13 – 25 mm hoses, the small universal fitting ⑨ must be screwed onto the large universal fitting ⑦.		

Connecting the hose [Fig. I7]:

The following connection kits are required for 13 mm to 19 mm connections:

13 mm (½"):	GARDENA Pump Connection Set	Art. 1750
16 mm (¾"):	GARDENA Tap Connector	Art. 18202 and
	GARDENA Standard Hose Connector	Art. 18216

19 mm (¾"):	GARDENA Pump Connection Set	Art. 1752
-------------	-----------------------------	-----------

1. Cut off nipples of the universal fitting ⑦/⑧, which are not needed, to match the hose connection.
 2. Screw the universal fitting ⑦/⑧ onto the pump.
 3. Connect the hose to the universal fitting ⑦/⑧.
- We recommend that you secure 50 mm (2"), 38 mm (1 ½") and 25 mm (1") hoses additionally with a **GARDENA Hose Clip Art. 7195** (for 50 mm), **Art. 7193** (for 38 mm) and **Art. 7192** (for 25 mm).

3. OPERATION

Automatic operation [Fig. O1]:

The float switch ⑤ turns the pump on automatically when the water level exceeds the cut-in height and the water is pumped out.

The float switch ⑤ turns the pump off again as soon as the water level falls below the cut-out height.

1. Stand the pump on a firm surface

- or -

use a rope attached through the bore hole in the carrying handle ② to immerse the pump in a well or shaft.
During automatic operation, ensure that the float switch ⑤ can move freely.

2. Plug the power cable ① into a mains socket.

Adjusting the Cut-in and Cut-out Height [Fig. O2]:

The maximum cut-in height and minimum cut-out height (see 7. TECHNICAL DATA) can be adjusted.

→ Press the cable of the float switch ⑤ into an opening in the float switch lock ③.

Do not select a cable length that is too long or short to ensure that the float switch can turn on and off properly.

- The higher the opening of the float switch lock ③, the higher the cut-in and cut-out height.
- The shorter the length of cable between the float switch ⑤ and the float switch lock ③, the lower the cut-in height and the higher the cut-out height.

The cable length between the float switch ⑤ and the float switch lock ③ must always be at least 10 cm.

Manual operation [Fig. O3]:

The pump remains in constant operation because the float switch is bypassed.

1. Push the float switch ⑤ onto the float switch lock ③ with the cable downward.
2. Stand the pump on a firm surface

- or -

use a rope attached through the bore hole in the carrying handle ② to immerse the pump in a well or shaft.

3. Plug the power cable ① into a mains socket.

The residual water height (approx. 3 mm with 21000 inox/ 43 mm with 20000 inox) is only reached in the manual operation mode, as the Float Switch in automatic operation already switches off the pump in advance.

Only for 21000 inox:**Flat suction/Normal operation [Fig. O4]****Flat suction [Fig. O5]:**

→ Turn the 3 swivel feet ⑧ 180° to **1 mm**.

Normal operation [Fig. O6]:

→ Turn the 3 swivel feet ⑧ 180° to **5 mm**.

The residual water level of approx. 3 mm is only reached during flat suction in the manual operation mode.

4. STORAGE

To put into storage:

→ Store the pump away from frost before the first frost sets in.

IMPORTANT!

Dispose of the product through or via your municipal recycling collection centre.

Disposal:

(in accordance with RL2012/19/EC)

The product must not be disposed of to normal household waste. It must be disposed of in line with local environmental regulations.

5. MAINTENANCE

The pumps are virtually maintenance-free.

Flushing the Pump:

After having pumped chlorinated swimming pool water or other liquids leaving residues, the pump should be rinsed with clear water.

Cleaning the suction base and impeller [Fig. M1]:

DANGER! Electric shock!

Risk of injury due to electric shock.

→ Disconnect the pump from the mains before cleaning the suction base and impeller.

1. Unscrew the 6 Phillips screws ⑨ and pull the suction base ⑩ off the pump.
2. Clean suction base ⑩ and impeller ⑪ (the warranty does not become void as a result of this maintenance work).
3. Reinstall the suction base ⑩ and screw in the Phillips screws ⑨.

For safety reasons a damaged impeller ⑪ can only be exchanged by the GARDENA Service Centre.

6. TROUBLESHOOTING

Problem	Possible Cause	Remedy
Pump is running, but doesn't deliver	Air cannot escape, since pressure line is closed.	→ Open pressure line (e.g. kinked pressure pipe).
	Air locks in the suction base.	→ Wait for max. 60 seconds until the pump deaerates automatically over the vent valve. If necessary, switch off and start it again.
	Impeller clogged.	→ Disconnect plug and clean impeller (see 5. MAINTENANCE).
	When starting the pump, water height falls below the min. water level.	→ Submerge pump deeper.
Pump doesn't start or suddenly stops during operation	Thermal overload switch has switched the pump off due to overheating.	→ Disconnect plug and clean impeller (see 5. MAINTENANCE). Observe max. media temperature of 35 °C.
	No power.	→ Check fuses and electric connections.
	Dirt particles are jammed in the suction base.	→ Disconnect plug and clean suction base (see 5. MAINTENANCE).
Pump runs, but output suddenly decreases	Suction base is clogged.	→ Disconnect plug and clean suction base (see 5. MAINTENANCE).

**NOTE: For any other malfunctions please contact the GARDENA service department.
Repairs must only be done by GARDENA service departments or specialist dealers approved by GARDENA.**

8. SERVICE / WARRANTY

Service:

Please contact the address on the back page.

Warranty:

In the event of a warranty claim, no charge is levied to you for the services provided.

GARDENA Manufacturing GmbH offers a two-year warranty (effective as of the date of purchase) for this product. This warranty includes all significant defects of the product that can be proved to be material or manufacturing faults. This warranty is fulfilled by supplying a fully functional replacement product or by repairing the faulty product sent to us free of charge; we reserve the right to choose between these options. This service is subject to the following provisions:

- The product was used for its intended purpose as per the recommendations in the operating instructions.

- Neither the purchaser nor a third party has attempted to repair the product.

This manufacturer's warranty does not affect warranty entitlements against the dealer/retailer.

If problems arise with this product, please contact our Service department or send the defective product along with a brief description of the fault to GARDENA Manufacturing GmbH, making sure to have sufficiently covered any shipping costs and to have followed the relevant postage and packaging guidelines. A warranty claim must be accompanied by a copy of the proof of purchase.

Consumables:

The wear parts turbine and pump base are excluded from the guarantee.
