GETTING STARTED WITH THE GARDENA ROBOTIC LAWN MOWER

Installation support videos can be found on www.gardena.com.

For more information and instructions, read the complete Operator's manual or visit www.gardena.com.

1. To install the charging station

- Place the charging station on a flat level surface where there is open space.
NOTE: To place the charging station in a limited space or in a corner, please read the Operator's manual.
- Connect the low voltage cable to the charging station and the power supply.
- If outdoor, put the power supply at a minimum height of 30 cm / 12 in from the ground.
- Connect the power supply to a 100-240 V wall socket.
- Place the robotic lawn mower in the charging station.
- Push the **ON/OFF** button to switch on the robotic lawn mower and to charge the battery while the boundary wire is laid.
NOTE: Do not continue with any product settings before the installation is complete.

2. To install the boundary wire

- Lay the boundary wire so that it forms a loop around the whole work area using stakes supplied or bury the wire.
NOTE: Do not lay the boundary wire in sharp bends.
- Adapt the distance between the boundary wire and different objects.
 - A: Lay the boundary wire around all work area in a loop.
 - B: High obstacles > 5 cm / 2 in e.g. wall or fence.
 - C: Low obstacles 1-5 cm / 0.4-2 in. or a dropped edge e.g. flower bed.
 - D: Objects level with the lawn 0-1 cm / 0.4 in e.g. path, paving stones.
 - E: Make an island to isolate areas.
- Make an eyelet at the point on the boundary wire where the guide wire is later connected (F).
- To handle slopes, passages and secondary areas, refer to the Operator's manual.

- STOP button
- LED for function check of the charging station, boundary and guide wires
- Charging station
- Display
- Keypad
- ON/OFF button
- Start button

3. To connect the boundary wire

1. Open the connector and lay the boundary wire in the connector.
2. Press the connector and the wire together by using a pair of pliers.
3. Cut off the wire 1-2 cm / 0.4-0.8 in. after the connectors.
4. Press the boundary wire connectors onto the contact pins marked L (left) and R (right) on the charging station.

NOTE: The right-hand wire must be connected to the right-hand contact pin on the charging station, and the left-hand wire to the left-hand pin.

4. To install and connect the guide wire

Install a guide wire to lead the robotic lawn mower to remote parts of the lawn and to help it to find the charging station.

1. Push the guide wire through the bottom of the charging station and fasten it into place using the snap locks.
2. Fit the connector to the guide wire in the same way as for the boundary wire, according to the instructions above.
3. Press the guide wire connector onto the contact pin marked GUIDE on the charging station.
4. Pull the guide wire a minimum of 1 m / 3.3 ft. straight out from the front edge of the charging station.
5. Lay the guide wire from the charging station to the point on the boundary wire (eyelet) where the connection is made using stakes supplied or bury the wire.

NOTE: Do not lay the guide wire in sharp bends and it cannot cross the boundary wire that for instance is laid out for an island.

6. Cut the boundary wire at the center of the eyelet that was made in step 2.3.
7. Connect the guide wire to the boundary wire by inserting the boundary wires and guide wire in the coupler, and pressing the coupler together with a pair of pliers.

NOTE: After the guide wire is installed, attach the charging station to the ground with the supplied screws and allen key.

NOTE: For optimal performance through narrow passages please ensure the guide wire is laid correctly through it. Please read the Operator's manual for further instructions.

Power supply
(the appearance of the power supply may differ depending on market)

Low-voltage cable

Boundary wire and couplers

Stakes

Connectors

Measurement gauge

5. To start and stop the robotic lawn mower

When starting the robotic lawn mower for the first time a start-up sequence begins where you choose your language, country, date, time and personal PIN code. There is also a guide calibration, where the robotic lawn mower automatically follow the guide wire.

To start the product

1. Open the hatch to the keypad.
2. Push the **ON/OFF** button for 3 seconds.
3. Enter the PIN code.
4. Select the operating mode.
5. Close the hatch.

To stop the product

1. Push the STOP button.

6. To change the settings

All settings for the robotic lawn mower are done via the menu functions. Please read the Operator's manual and become familiar with the menus and settings.

1. The Schedule function is used to adjust the mowing time to suit your work area. If the robotic lawn mower is allowed to mow too often, the grass may appear flattened. Use the scheduling wizard to set a suitable schedule. Push the **Menu** button and select *Schedule > Wizard* and enter the size of your work area. If you want to change the schedule settings for individual days use *Schedule > Advanced*.
2. Use the **Mode** button to choose operating mode, for example *Main area, Secondary area and Park*.

Test run the robotic lawn mower through narrow passages

Narrow passages in the garden can make it difficult for the mower to find the charging station. Use the *Test* function to test that the robotic lawn mower can travel through the narrow passage.

1. Place the robotic lawn mower in the charging station.
2. Select *Test* in the menu *Settings > Lawn coverage > More > Test* and push OK. Then push the Start button and close the hatch.
3. Check that the robotic lawn mower follows the guide wire through the passage.
 - a. If the robotic lawn mower runs through the passage, the test is complete.
 - b. If the robotic lawn mower does not get through the passage:
Check that the guide wire has been laid according to the instructions in the Operator's manual.

To pair the robotic lawn mower with an app

Two different apps are used for settings and operation of the product. Both apps can be downloaded for free from App Store and Google Play.

GARDENA Bluetooth® App

For products without the smart system. The product is connected via Bluetooth® and you have access to the product as long as you are within short-range (Bluetooth®).

1. Download the GARDENA Bluetooth® App on your mobile device.
2. Open the GARDENA Bluetooth® app and follow the instructions.
3. Switch off the robotic lawn mower and switch it on again to enable the Bluetooth® pairing mode for 3 minutes.

GARDENA smart system

For smart products with the smart system. The gateway is connected to internet so you have access to the product from anywhere.

1. Install the smart gateway according to the instructions in the Operator's manual.
2. Download the GARDENA smart system app on your mobile device.
3. Open the app and follow the instructions.

The right to make changes without prior notice is reserved.
